

Contents

Introduction	i
1 Foundations	1
1.1 Prerequisites	1
1.2 Foundations of Programming	1
1.3 Simple data types	1
1.3.1 Integers in binary	2
1.3.2 Floating-point numbers	3
1.3.3 Characters and ASCII	4
1.3.4 Strings	4
1.3.5 Representations and types	4
1.3.6 Summary	5
1.4 Variables	6
1.4.1 Assignment	6
1.4.2 Mutable and immutable variables	8
1.4.3 Summary	11
1.5 Control structures	12
1.5.1 Conventional control structures	13
1.5.2 Control structures in computers	16
1.5.3 Summary	16
1.6 Functions	18
1.6.1 Calling functions	18
1.6.2 Summary	21
1.7 Practice	22
2 Understanding VMs	25
2.1 Simple VMs	25
2.1.1 The stack	26
2.1.2 Interpreter technique	27
2.1.3 VM1 implementation	27
2.1.4 REGVM implementation	28
2.1.5 Portability	31
2.1.6 Summary	32
2.2 Stack-based VM	33
2.2.1 Comparisons	35
2.2.2 Iterations	36

2.2.3	Error handling	37
2.2.4	Summary	39
2.3	Memory and functions	40
2.3.1	Frame pointer	44
2.3.2	Local storage	46
2.3.3	Memory management	46
2.3.4	Frame stack	48
2.3.5	Summary	52
2.4	Practice	53
3	Debugging, Optimisation, and Tests	57
3.1	Prerequisites	57
3.2	Basic tools	57
3.3	Debugging	57
3.3.1	Process	59
3.3.2	Tools	61
3.3.3	Summary	66
3.4	Optimisation	67
3.4.1	Memory	71
3.4.2	Time	72
3.4.3	Confusion matrix	73
3.4.4	Summary	78
3.5	Tests and testing	79
3.5.1	Automated testing and continuous integration	82
3.5.2	Summary	84
3.6	Practice	85
4	Building and Experimenting	89
4.1	Prerequisites	89
4.2	The computer as hardware	89
4.2.1	Hardware	91
4.2.2	The Pico	93
4.2.3	Summary	96
4.2.4	Practice	96
4.3	Input/Output	97
4.3.1	The Pico pins	98
4.3.2	Light switching circuit	99
4.3.3	Programmable I/O	100
4.3.4	State machines	102
4.3.5	Circuit for traffic lights	105
4.3.6	Pedestrian crossing	106
4.3.7	Temperature measurements	108
4.3.8	Temperature indicator	109
4.3.9	Summary	111
4.3.10	Practice	113
4.4	Secondary memory	116
4.4.1	Save and load temperatures	118
4.4.2	Summary	118
